PROFILE

Flutter and React Native developer. Two and a half years at Utop (2023–2026) shipping production apps for metro payments, life insurance and retail loyalty — including a three-app loyalty platform for FamilyMart Vietnam. Owned App Store and Play submissions end to end, including diagnosing and clearing rejections. Outside client work I design and run my own systems in TypeScript, NestJS and PostgreSQL.

EXPERIENCE

Utop — Mobile Developer

Ho Chi Minh City · Sep 2023 – Mar 2026

Shipped Flutter and React Native apps for metro payments, life insurance and retail loyalty. Owned end-to-end App Store and Play submissions, including diagnosing and clearing rejections.

Freelance — React Native Developer

Remote · Jul 2024 – Aug 2025

Sole developer on GreenOil, a fuel distributor's order and invoice system. Scoped, built and delivered it alongside full-time work.

PRODUCTION WORK

FamilyMart Vietnam — loyalty platform, three apps

1,155 + 115 + 24 source files

React Native · React 19 · TypeScript · Redux

- **Member app** — points, history, challenges, vouchers, in-app commerce, store locator, QR scan, surveys, news
- **Cashier app** — order and inventory screens, rebuilt in TypeScript on React Native 0.84
- **Mid-Autumn campaign** — a lucky-box game shipped inside the app as a React 19 WebView, against live prize and redemption APIs, on a campaign deadline
- Kept one visual language across three codebases and two React versions

CapitaOne — Flutter retail loyalty app

237 Dart files · 42,483 lines

Flutter · Dio · build flavours

- Feature work across a mature Flutter codebase with separate UAT and production flavours
- Built debug tooling that lets QA inspect live traffic

HCM Metro HURC — Flutter SDK inside a third-party app

Flutter · REST · eKYC

- Payment and account-linking screens that drop into the metro operator's own application
- Implemented eKYC identity capture; wired payment and account APIs
- Held UI parity with the existing web flow

Shinhan Life Vietnam — loyalty CRM, mobile and web

Flutter · .NET MVC

- Points system embedded in an insurer's main app — customers earn and redeem without a second login
- Synchronised customer data across mobile and web; shipped the web-side SDK alongside the mobile build

British University Vietnam — React Native student app

271 source files

React Native · Redux · i18n

- Attendance and academic-progression screens; skills-point claims, history and transcript views
- Clubs, societies and event attendance flows; bilingual interface throughout

MaisonOnline — React Native commerce app, maintenance and upgrade

1,038 source files

React Native · TypeScript

- Upgraded the React Native core across major versions without stopping the release train
- Fixed and reshaped UI against real customer feedback

Honda Vietnam — loyalty WebView SDK

React · Framer Motion

- Motion design for the lucky-draw and reward states; consent and gift-history flows
- A bridge layer between the web surface and the native shell

GreenOil — fuel order and invoice management (freelance)

React Native

- Sole developer: order creation and invoice generation, end to end
- Wired the order-processing and invoice APIs; viewing, filtering and exporting invoice data

OWN WORK — BUILT AND RUNNING

api-log — reverse proxy that records API traffic, plus a mock server

61-check end-to-end smoke test

Bun · Hono · SQLite · React 19 · Tailwind v4

- QA points the app at a proxy instead of the backend; request, response and timing are recorded with no backend change
- Learns the shape of each endpoint’s response and reports when the backend quietly changes the contract
- Hand-written ZIP, binary-plist and AndroidManifest parsers read `.ipa/.apk` with no dependencies — cross-checked against Apple’s and Google’s own tooling
- Runs as a service behind Cloudflare Tunnel on my own machine

DMS — distribution management back office

53 tables · 17,600 lines

NestJS · PostgreSQL 18 · React · Ant Design

- Stock is the result of an append-only ledger, never a stored number — triggers block UPDATE and DELETE
- Money posts through database functions in one transaction, never through a status flag
- Prices, unit factors and tax rates are frozen onto document lines, so editing a price list cannot rewrite history
- Idempotency keys on client submissions and on ledger writes

SKILLS

Mobile	Flutter, Dart, React Native, native release pipelines	Frontend	React 19, TypeScript, Tailwind CSS v4, Vite, GSAP, Framer Motion
Backend & data	NestJS, Bun, Hono, PostgreSQL, SQLite, REST design	Shipping	App Store & Play submission, rejection triage, Cloudflare Tunnel, Git

EDUCATION

VNUHCM — University of Science

Ho Chi Minh City · Villeurbanne · 2020 – 2023

Bilingual BSc in Information Technology, with Université Claude Bernard Lyon 1

Kew High School

Melbourne, Australia · 2017 – 2019

International student, computer science
